Plant Tissue Culture Media and Related Products

From PhytoTechnology Laboratories®

Tissue Culture Media: It's What We Do Best.

At the heart of *Phyto* Technology Laboratories® is our media for plant tissue culture. Our company started because we wanted to provide high-quality media at affordable prices. Every product we carry today, every service we offer, came from the desire to make tissue culture media for plant science research. Today, *Phyto* Technology Laboratories offers more than 150 different formulations of tissue culture media available for an array of different species, crops, and applications. We have made hundreds of custom formulations for our customers world-wide. We carry over 1000 products for the plant sciences and every new product was added while maintaining our commitment to quality and competitive pricing.

Our Promise of Quality

Phyto Technology Laboratories® knows that the basis of any good research is consistent repeatable results. To that end we go to great lengths to ensure that the media you get from Phyto Technology Laboratories will meet the quality that your research deserves. Tissue Culture Media is manufactured in compliance with cGMP guidelines and ISO standards of quality. Biochemical components used in manufacturing meet either USP or ACS specifications, where applicable to the component. Proprietary inventory management and manufacturing protocols ensure minimal lot-to-lot variation. All tissue culture media pass biological testing on commercially significant and product appropriate plant cell lines. Media must also pass physio-chemical testing prior to release. Discover more about the Phyto Tech™ Quality by visiting our website at

www.phytotechlab.com

Murashige & Skoog Media Family

*Phyto*Technology Laboratories offers more than 50 variations to the original Murashige & Skoog formulations including deficient media, crop specific media, and stock solutions of media and vitamins.

Deficient Media

M502 - MS Macronutrient Salt Base

M654 - MS Macronutrient Stock Solution

M554 - MS Micronutrient Salt Base

M529 - MS Micronutrient Stock Solution (10x)

M407 - MS Basal Salts without N, P, & K

M561 - MS Basal Mixture with 1/2 NH, NO, & KNO,

M571 - MS Basal Salt Mixture without NH, NO.

M531 - MS Basal Salt Mixture without Nitrogen

M290 - MS Modified Basal Salt Mixture with 1/2 NH₄NO₃, KNO₃, & CaCl₃

M153 - MS Basal Salt Mixture with 1/2 Macro- &

Micronutrients

Basal Salt Mixtures

M524 - MS Basal Salt Mixture

M576 - MS Basal Salt Concentrate Solution (20x)

M5541 - MS Basal Salt Mixture, Van Der Salm Modification

M504 - MS Basal Salts, Finer & Nagasawa Modification

M153 - MS Basal Salt Mixture with 1/2 Macro- &

Micronutrients

Media with Vitamins

L689 - Linsmaier & Skoog (LS) Medium

M5800 - MS Medium with FeNaEDTA

M541 - MS Modified Medium with Casein & Adenine; without KH₂PO.

M535 - MS Modified Medium with Adenine

M536 - MS Modified Medium with Adenine

M5642 - MS Medium, Van Der Salm Modification

M519 - MS Medium with Vitamins

M404 - MS Medium with Gamborg's Vitamins

M5531 - MS Medium with 1.0 g/L MES

L477 - Linsmaier & Skoog Medium with 1.0 g/L MES

Media with Vitamins & Carbohydrates

M5615 - MS Medium Solution (1x) with 15.0 g/L Sucrose & Glucose

M5501 - MS Medium with Vitamins & Sucrose

M5530 - MS Medium Solution (1x) with Vitamins & Sucrose

M5707 - MS Medium with 10.0 g/L Sucrose & 20.0 g/L Glucose

L473 - LS Medium with 30.0 g/L Sucrose &1.0 mg/L MES

Media with Agar

L467 - LS Medium with 30.0 g/L Sucrose & 7.0 g/L Agar

L452 - LS Medium with 30.0 g/L Sucrose, 7.0 g/L Agar, & 1.0

g/L MES

Liquid Media & Stock Solutions

M5615 - MS Medium Solution (1x) with Vitamins & 15.0 g/L Sucrose & Glucose

M5530 - MS Medium Solution (1x) with Vitamins & Sucrose

M654 - MS Macronutrient Stock Solution (10x)

M529 - MS Micronutrient Stock Solution (10x)

M576 - MS Basal Salt Concentrate Solution (20x)

Media with Vitamins & PGRs

M516 - MS BC Potato Medium

M401 - MS Modified Medium with BA & NAA

M550 - MS Modified Medium with Kinetin & 2,4-D

M701 - MS Modified Medium with 2iP, IAA, & Adenine

M702 - MS Modified Medium with 2iP, IAA, & Adenine

M555 - MS Modified Multiplication Medium with Kinetin

M517 - MS African Violet/Gloxinia Multiplication Medium

M518 - MS African Violet/Gloxinia Pretransplant Medium

M508 - MS Fern Multiplication Medium with Kinetin & NAA

M509 - MS Gerbera Multiplication Medium with Kinetin & IAA

M510 - MS Gerbera Pretransplant Medium with IAA

M511 - MS Kalanchoe Multiplication Medium with 2iP

M512 - MS Kalanchoe Pretransplant Medium with IAA

M527 - MS Multiplication Medium with Kinetin & IAA

M491 - MS Multiplication Medium with 2iP & IAA

M507 - Murashige Cattleya Orchid Medium with IAA, IBA, &

Crop Specific MS Modifications

M516 - MS BC Potato Medium

M517 - MS African Violet/Gloxinia Multiplication Medium

M518 - MS African Violet/Gloxinia Pretransplant Medium

M508 - MS Fern Multiplication Medium with Kinetin & NAA

M509 - MS Gerbera Multiplication Medium with Kinetin & IAA

M510 - MS Gerbera Pretransplant Medium with IAA

M511 - MS Kalanchoe Multiplication Medium with 2iP

M512 - MS Kalanchoe Pretransplant Medium with IAA

B144 - Banana AGS Medium

M462 - Musa (Banana) Multiplication Medium

M507 - Murashige Cattleya Orchid Medium with IAA, IBA, & NAA

H435 - Hosta Initiation/Multiplication Medium

H436 - Hosta Multiplication Medium

H437 - Hosta Pretransplant Medium

H3959 - Hosta Initiation/Multiplication Medium II

Vitamin Mixes & Solution

M533 - MS Vitamin Powder (1000x)

M553 - MS Vitamin Solution (1000x)

M547 - MS Modified Vitamin Solution (1000x)

M557 - MS Modified Vitamin Solution (1000x)

C149 - Chu N6 Vitamin Solution (1000x)

E330 - Eriksson Vitamin Solution (1000x)

G249 - Gamborg Vitamin Powder (1000x)

G219 - Gamborg Vitamin Solution (1000x)

K421 - Kao & Michayluk Vitamin Solution (100x)

M587 - Morel & Martin Vitamin Solution (100x)

M592 - Morel & Wetmore Vitamin Solution (100x)

N608 - Nitsch & Nitsch Vitamin Powder (1000x)

N603 - Nitsch & Nitsch Vitamin Solution (1000x)

S826 - Schenk & Hilderbrandt Vitamin Powder (100x)

S743 - Staba Vitamin Solution (100x)

Indicates the common or recommended usage of the product.

Indicates the form of the media (powder or stock solution).

Indicates the storage temperature of the product. RT indicates room temperature.

Understanding Our Media Terminology

Deficient Salts & Media: A basal salt mixture that lacks one or more essential elements. Macronutrient and micronutrient stock solutions are considered deficient media.

Basal Salt Mixtures: Contain only the inorganic elements of tissue culture media. Inorganic elements are divided into macronutrients and micronutrients. Typically, at least vitamins, carbohydrates, and a gelling agent will need to be added before inoculating the medium with plant tissue.

Media: Basal salt mixtures (inorganic elements) plus the addition of either vitamins, gelling agents, or carbohydrates. Typically, other organic components will need to be added before inoculating the medium with plant tissue. Media can also referred to as Basal Media.

Complete Media: A medium that contains the basal salts, vitamins, carbohydrates, and plant growth regulators.

Media with Gelling Agents: Generally considered to be comprised of media (inorganic elements plus vitamins) but also include a gelling agent and carbohydrate.

Amino acids or other nitrogen sources and undefined organic supplements are typically considered optional or are dependent on the stage of plant growth. Despite this, Phyto Technology Laboratories offers a variety of media formulations that include these optional components.

M524 Murashige & Skoog Basal Salt Mixture

Contains the macro- and micronutrients as described by Murashige & Skoog (1962). Originally developed for use with tobacco callus cultures.

Available Package Sizes:

100L

M519

Murashige & Skoog Basal Medium with Vitamins

Contains the macro- and micronutrients, and vitamins as described by Murashige & Skoog (1962).

Available Package Sizes:

10L

50L

100L

2 to 8 °C

Murashige & Skoog Modified Basal Medium with Gamborg Vitamins

Contains the macro & micronutrients described by Murashige & Skoog, & vitamins described by Gamborg, et al (1966).

4.44 g/L

Available Package Sizes:

501

1001

500L

500L

M499 Murashige & Skoog Modified Basal Salt Mixture

Contains the macro- and micronutrients as described by Murashige and Skoog (1962) except for the replacement of Ferrous Sulfate and Na2-EDTA with FeNa-EDTA.

Available Package Sizes:

10L

501

Media, Equipment and Supplements for Orchid Tissue Culture

Phyto Technology Laboratories provides more than 50 modification of the original Murashige & Skoog Media. Some of our best selling MS media formulations are listed in this section. If you have a MS modification that you can't find from us, remember that we can custom manufacture it for you. For our complete listing of Murashige & Skoog media, please visit www.phytotechlab.com.

B144 Banana AGS Basal Medium

Contains the macro- and micronutrients, vitamins, and plant growth regulators required to culture bananas.

Available Package Sizes:

1L

10L

50L

owder

2 to 8 °C

L689 Linsmaier & Skoog Basal Medium

Contains the macro- and micronutrients, & vitamins as described by Linsmaier & Skoog (1964). This medium is the standard Murashige & Skoog (MS) basal salts supplemented with Linsmaier and Skoog vitamins. This is a subsequent optimization of the medium developed by Murashige and Skoog, Linsmaier's research on the optimization of vitamins first described by Murashige as essential.

4.71 g/L

Available Package Sizes:

50L

100L

Powder

L467 Linsmaier & Skoog Modified Basal Medium with Sucrose & Agar

Contains the macro- and micronutrients, & vitamins as described by Linsmaier & Skoog (1964). This medium is the standard Murashige & Skoog (MS) basal salts supplemented with Linsmaier and Skoog vitamins. This is a subsequent optimization of the medium developed by Murashige and Skoog. Linsmaier's research on the optimization of vitamins first described by Murashige as essential.

Powder

Available Package Sizes:

11

101

50L

M 508 Murashige Fern Multiplication Medium

Contains the macro- and micronutrients as described by Murashige and Skoog (1962) and the vitamins described by Linsmaier and Skoog (1965). Also contains (mg/L): 255 Sodium Phosphate monobasic, 2.0 Kinetin, 0.1 NAA, and FeNa-EDTA in place of Ferrous Sulfate and Na2-EDTA.

4.66 g/L

Available Package Sizes:

1L

101

50L

M654 Murashige & Skoog Macronutrient Stock Solution (10x)

Contains the macronutrients as described by Murashige & Skoog (1962).

100 mL/L

Available Package Sizes:

500mL

1L

M 5 2 9 Murashige & Skoog Micronutrient Stock Solution (10x)

Contains the micronutrients as described by Murashige & Skoog (1962).

s: 500mL

11

M 561 Murashige & Skoog Modified Basal Salt Mixture

Contains the macro- and micronutrients as described by Murashige and Skoog (1962) with the following exceptions: ½x Ammonium Nitrate (product number A300) and ½x Potassium Nitrate (product number P100).

Available Package Sizes:

11

10L

50L

M5800 Murashige & Skoog Basal Medium with FeNa-EDTA

Contains the macro- & micronutrients and vitamins as described by Murashige and Skoog (1962) with the exception of FeNa-EDTA added as the iron source.

Available Package Sizes:

1L

10L

50L

100L

M5501 Murashige & Skoog Basal Medium with Vitamins & Sucrose

Contains the macro- and micronutrients, and vitamins as described by Murashige & Skoog (1962). Modified to include $30\,\mathrm{g/L}$ sucrose.

34.43 g/L

Available Package Sizes:

1L

10L

50L

100L

Murashige & Skoog Medium with Vitamins and 30 g/L Sucrose (1x)

Sterile filtered liquid solution containing the Macro- and Micronutrients and Vitamins as described by Murashige & Skoog (1962), then modified to contain 15 g/L sucrose and 15 g/L glucose.

Available Package Sizes:

500mL

1L

M 5 3 5 Murashige & Skoog Modified Basal Medium

Contains the macro- and micronutrients as described by Murashige and Skoog (1962) and the vitamins described by Linsmaier and Skoog (1965). Also contains 80 mg/L Adenine Hemisulfate (product number A545). Comparable to Linsmaier & Skoog Basal Medium (L689) with an added 80 mg/L Adenine Hemisulfate.

Available Package Sizes:

11

101

501

1001

M 571 Murashige & Skoog Modified Basal Salt Mixture

Contains the macro- and micronutrients as described by Murashige and Skoog (1962) with the following exception: no Ammonium Nitrate (product number A300).

2.68 g/L

Available Package Sizes:

11

10L

50L

M462 Musa (Banana) Multiplication Medium

Contains the macro- and micronutrients as described by Murashige and Skoog (1962). IITA formulation as described by Vuylsteke (1989) (International Institute for Tropical Agriculture).

Available Package Sizes:

11

10L

Classic Media

Beyond the Murashige & Skoog media, Phyto Technology Laboratories offers a range of classic tissue culture media.

C167 Chu's N6 Basal Medium with Vitamins

Contains the macro- and micronutrients, and vitamins as described by Chu (1975). Chu (N6) Medium was developed to promote the initiation, growth, and differentiation of callus from rice pollen cultures. Ammonium Nitrate has been replaced by Ammonium Sulfate. The molar concentration of NH4 is 7.0 mM compared to 20.6mM for MS.

Available Package Sizes:

L

10L

50L

100L

G768 Gamborg Basal Salt Mixture (B-5 Salts)

Contains the macro- and micronutrients as described by Gamborg, et al. (1968). This medium was developed for the initiation and growth of soybean cell suspensions. This medium contains no Ammonium Nitrate; it does contain Ammonium Sulfate and increased levels of Potassium Nitrate. Concentrations of NH4 $^{+}$ over 2 mM inhibited cell growth.

Available Package Sizes:

1L

10L

50L

100L

G398 Gamborg B-5 Basal Medium

Contains the macro- and micronutrients, and vitamins as described by Gamborg, et al. (1968). This medium was developed for the initiation and growth of soybean cell suspensions. This medium contains no Ammonium Nitrate; it does contain Ammonium Sulfate and increased levels of Potassium Nitrate. Concentrations of NH4⁺ over 2 mM inhibited cell growth.

 $3.21 \, g/L$

Available Package Sizes:

10

50L

100L

H353 Hoagland Modified Basal Salt Mixture

Contains the macro- and micronutrients as described by Hoagland and Arnon (1950). With Ferrous Sulfate (product number F263).

Available Package Sizes:

11

101

501

100L

\$816 Schenk & Hildebrandt Basal Salt Mixture

Contains the macro- and micronutrients as described by Schenk and Hildebrandt (1972).

3.20 g/I

Available Package Sizes:

__1

10L

50L

100L

W898 White Basal Salt Mixture

Contains the macro- and micronutrients as described by White (1963).

 $0.93 \, g/I$

Available Package Sizes:

1L

10L

Media for Woody Plant Species

Phyto Technology Laboratories provides a range of media for use with woody plant species. The unique nutrient requirements for woody plants continues to present challenges for researchers in finding the right media for their cultivars. Some of the most popular tissue culture media, that are applicable to a wide variety of woody plants are listed below. For our complete listing of woody plant media, please visit www.phytotechlab.com.

A267 Anderson Basal Salt Mixture

Contains the macro- and micronutrients as described by Anderson (1978, 1980). Anderson achieved a two-fold increase in multiplication of red raspberries using this formulation compared to MS. The optimal concentrations of growth regulators for shoot multiplication of red and black raspberries was 0.1 - $2.5\,\mu\mathrm{M}$ IBA (product number I560) and 4.5 - 9.0 μM 6-BA (product number B800).

Available Package Sizes:

50L

Powder

Chee & Pool C2D Vitis Medium

Contains the macro- and micronutrients as described by Chee & Pool (1987). This medium was developed to improve grape shoot multiplication. This formulation has reduced levels of Chloride, Iodide, and manganese compared to MS. Calcium Chloride was replaced by Calcium Nitrate, thus improving the quality of grape shoots.

4.49 g/I

Available Package Sizes:

50L

D146 DCR Basal Salt Mixture

Contains macro- and micronutrients as described by Gupta & Durzan (1985). This medium was developed to promote shoot proliferation. This formulation has approximately ¼ the concentration of NH₄NO, and KNO, compared to MS. Additional Ca⁺² and NO,- ions are supplied by Ca(NO,),.

 $1.64 \, g/I$

Available Package Sizes:

101

50L

D190 **DKW Basal Salt Mixture**

Contains macro- and micronutrients as described by Driver & Kuniyuki (1984) and McGranahan, et al. (1987). Without vitamins. This medium was developed for the multiplication of shoots from nodal explants. The medium was supplemented with 4.5 μM BA (product number B800) and 5 nM IBA (product number I560).

5.22 g/L

Available Package Sizes:

50L

L154 Lloyd & McCown Woody Plant Basal Mixture

Contains the Woody plant medium macro- and micronutrients as described by Lloyd & McCown (1981). This medium was originally developed for the culture of shoot tips of Mt. Laurel,and has become a standard for the culture of many woody plants. Potassium Nitrate (product number P100) has been replaced with Potassium Sulfate (product number P854) in the media.

2.30 g/I

Powder

_449 Lloyd & McCown Woody Plant Basal Medium with Vitamins

Contains the Woody plant medium macro- and micronutrients and vitamins as described by Lloyd & McCown (1981). This medium was originally developed for the culture of shoot tips of Mt. Laurel, and has become a standard for the culture of many woody plants. Potassium Nitrate (product number P100) has been replaced with Potassium Sulfate (product number P854) in the media.

Available Package Sizes:

10L

50L

Focus on your Research

PhytoTechnology Laboratories® knows that your time is valuable. Making media in the lab from scratch is time consuming and complicated. Making large batches on a frequent basis becomes even more time consuming and costly. Even with careful precision, lot-to-lot variances can crop up during media production. These kinds of variances can be problematic to achieving consistency in research or production.

Let us help improve the efficiency of your labwork so that you can focus on the science. Simplify your day-to-day laboratory protocols by allowing us to provide ready-to-use media, prepared media culture vessels or custom packaged buffers, liquid media or other custom packaged products. See the difference that *Phyto* Tech™ Quality can make. Wouldn't you like to make your research or production more efficient, more cost effective, and more reliable?

Custom Media Manufacturing

Have a proprietary media formulation or looking for a non-proprietary formulation we don't carry? *Phyto* Technology Laboratories® can make it for you. Phyto Technology Laboratories can custom manufacture proprietary and non-proprietary dry powder media and buffers for customers according to cGMP and ISO standards of quality, in our environmentally controlled manufacturing facility in Overland Park, KS. We can manufacture lots of up to 50,000 liters of dry powder media. We can also manufacture sterile liquid media in batches up to 1000 liters.

- Batches from 100 Liters to 50,000+ Liters;
- Packaged in bottles, foil bags, or polycarbonate pails at the volume that best meets your daily needs;
- Competitive pricing makes using custom media more cost effective compared to purchasing individual components and making media or stock solutions from scratch in the lab;
- Reduces labor and overhead costs associated with media preparation; and
- Reduces technician error by eliminating lot-to-lot variances.

Liquid Media Production

Need a stock solution for plant cell media? *Phyto* Technology Laboratories® can custom manufacture liquid solutions for your needs. *Phyto* Technology Laboratories® has dedicated production areas for the manufacturing of sterile liquid products.

- Batches from 10 to 1,000 Liters;
- Individual packaging as small as 1 mL up to 20 L packaging;
- Sterility is tested to US Pharmacopeia (USP) <71> protocols;
- Ready-to-use liquids reduce labor costs and overhead associated with media and stock solution preparation; and
- Reduces technician errors associated with media preparation.

Confidentiality Guaranteed

Phyto Technology Laboratories® knows that you've spent years, maybe even decades, researching and perfecting your media formulations. To protect your research, Phyto Technology Laboratories® will sign mutual non-disclosure agreements and welcomes outside audits of our manufacturing process. Not only will you get media of the highest quality, you'll get peace of mind.

<i>Phyto</i> Technology Laboratories'® Custom Capabilities											
Custom Service	Production Capabilities	Packaging Capabil- ities	Typical Lead Time for your first batch								
Dry Powder Plant Tissue Culture Media	100 Liters up to 50,000+ liters batches	1L to 10,000L packages	1-2 weeks after approval								
Dry Powder Microbiology Media	1 kg up to 120 kg batches	100 g to 25 kg packages	1-2 weeks after approval								
Liquid Media	10 liter up to 1,000 liter batches	100 mL to 20 liter packages	1-2 weeks after approval								
Liquid Stock Solutions	10 liter up to 1,000 liter batches	1 mL to 20 liter packages	1-2 weeks after approval								
Custom Packaged Biochemicals	n/a	10 mg to 25 kg packages	1 week depending on product availability								

Media, Equipment and Supplements for Orchid Tissue Culture

Phyto Technology Laboratories provides a range of products for orchid tissue culture. Beyond some of our most popular media, listed below, we also carry reagents like Activated Charcoal (product number C325) and Coconut Water (product number C195) as well as a range of glass culture vessels ideal for orchid cultures. For a complete listing of all of our products for Orchids, visit www.phytotechlab.com.

B141 BM-1 Terrestrial Orchid Medium with Agar

Contains the macro- and micronutrients, vitamins, and supplements required to culture orchids. Contains agar. Seed germination may be enhanced by the addition of 50 mL/L Coconut Water (product number C195).

Available Package Sizes:

1L

10L

50L

F522 Fast Orchid Medium

Contains the macro-and micronutrients, vitamins, sucrose fructose, agar, and supplements required to culture terrestrial orchids.

26.22 g/L

Available Package Sizes:

1L

10L

50L

K425 Knudson C Modified Plus Orchid Medium

Proprietary Formulation. Contains Charcoal, Sucrose, Banana Powder and gelling agent. The unadjusted pH of this medium typically ranges from 4.1 - 5.6. The pH should be checked and adjusted as desired during preparation.

Available Package Sizes:

1L

101

50L

M534 Malmgren Modified Terrestrial Orchid Medium

Contains the macro- and micronutrients and organic constituents as described by Malmgren (1996). Without sucrose and agar.

Available Package Sizes:

-1L

10L

50L

M 5 0 7 Murashige Modified Cattleya Orchid Multiplication Medium

Contains the macro- and micronutrients as described by Murashige and Skoog (1962) and modified vitamins. Contains 20 g/L Sucrose. Also contains: 150 mg/L Citric Acid, 0.3 mg/L IAA, 1.75 mg/L IBA, 1.75 mg/L NAA, and Ferric Sodium EDTA in place of Ferrous Sulfate and Disodium EDTA.

Available Package Sizes:

1L

10L

50L

O156 Orchid Maint/Replate Medium with Banana & Charcoal, without Agar

This medium is a modification of our Orchid Maintenance/Replate Medium (P748). It lacks a gelling agent to permit its use in a liquid culture system. This medium contains banana powder to promote growth and rooting. The pH of this medium should be adjusted after adding the gelling agent and prior to sterilization.

Available Package Sizes: 1L 10L 50L

P668 Orchid Maintenance Medium with Charcoal, without Agar

This medium was originally developed for the culture of Phalaenopsis stem props. It is now widely used as a seed sowing and replate medium for many epiphytic orchid species.

Powder

Available Package Sizes:

11

10L

50L

100L

O139 Orchid Maintenance/Replate Medium without Charcoal & Agar

This medium is a modification of our original orchid replate medium except without charcoal (and agar). This medium permits the culture of orchids in a liquid system or for orchid species that do not require charcoal to neutralize phenolics produced by the plants.

Available Package Sizes:

11

10L

50L

P748 Orchid Maintenance/Replate Medium with Banana, Charcoal, & Agar

This medium is a modification of our original orchid replate medium. It is a complete replate medium containing banana powder to promote growth & rooting, and a gelling agent (agar) for physical support. This medium should be pH adjusted prior to sterilization.

Available Package Sizes:

1L

101

50L

64.31 g/L I

Powder 2 to 8 °C

Available Package Sizes

P793 Orchid Multiplication Medium without Charcoal & Agar

This medium is a modification of our Orchid Multiplication Medium by the deletion of charcoal and agar. It was originally developed for the multiplication of plantlets from Phaleonopsis flower stem nodal segments. This medium, when used in combination with Orchid Maintenance/ Replate Medium (product numbers P668 or P748), provides a complete plant propagation cycle.

65.79 g/I

Available Package Sizes:

1L

10L

50L

P723 Orchid Seed Sowing Medium

This medium is a modification of our original orchid replate medium which has shown to be too high in salt concentration as a seed propagation medium. This medium is modified by reducing the major inorganic salts by ½x. The reduction of salt helps promote the germination of seed of many epiphytic & terrestrial species. Germination may be enhanced by adding 50 mL of coconut water per liter of medium.

32.74 g/L

Powder

Available Package Sizes:

1L

10I

50L

P656 PhytoTech™ Phalaenopsis Replate Medium

Phyto Tech™ Phalaenopsis Replate Medium is a proprietary formulation. It's a complete orchid replate medium and is ready for use after pH adjustment. Contains sucrose, banana powder, potato powder, charcoal, a gelling agent.

Available Package Sizes:

11

10L

50L

T839 Terrestrial (Cypripedium) Orchid Medium

Contains a modification of the macro- and micronutrients, glucose, and agar as described by Steele (1996). Contains 400 mg/L Calcium Nitrate and 400 mg/L Casein. Without Ammonium Nitrate.

27.44 g/I

Available Package Sizes:

11

10L

Plant Growth Regulators

Phyto Technology Laboratories offers a line of the most popularly used plant growth regulators. Our wide range of Auxins, Cytokinins, Gibberellins, and other plant growth regulators are all tissue culture tested for activity and many are available as sterile filtered liquid solutions so you don't have to make your own stock solutions. Find our full listing of all of our plant growth regulators online at www.phytotechlab.com.

(+/-) Abscisic Acid (ABA)

ABA; mixture of (2Z,4E)-5-[(1S)-Hydroxy-2,6,6-trimethyl-4-oxo-2-cyclohexen-1-yl]-3-methyl-2,4pentadienoic acid and its enantiomer (2Z,4E)-5-[(1R)-Hydroxy-2,6,6-trimethyl-4-oxo-2-cyclohexen-1-yl]-3-methyl-2,4-pentadienoic acid.

Available Package Sizes:

100mg

500mg

5g

14375-45-2 EtOH/DMSO

-20°C

Gibberellic Acid

GA3; Gibberellin A3.

Also available as Sterile Filtered solutions in concentrations of 1 mg/mL (product number G198) and 13 mg/mL (product number G362).

77-06-5

Available Package Sizes:

500ma

2,4-Dichlorophenoxyacetic (2,4-D) Acid Solution (1 mg/mL)

Sterile Filtered solution. 2,4-Dichlorophenoxyacetic acid being an auxin can support embryogenesis and callus formation at low concentrations, and have herbicidal activity at high concentrations, 2,4-D

Also available as a Sterile Filtered Solution in a concentration of 10 mg/mL (product number D309).

Available Package Sizes:

100mL

500mL

Water 2 to 8 °C

N600

α-Naphthaleneacetic Acid (NAA)

α-Naphthaleneacetic acid is a naphthalene-based auxin.

Also available as a Potassium Salt, K-NAA (product number N610) or as a Sterile Filtered solution in a concentration of 1 mg/mL (product number N605).

Available Package Sizes:

5g

Indole-3-Acetic Acid (IAA)

IAA; Heteroauxin. Indole-3-acetic acid is an indole-based auxin.

Also available as a Sterile Filtered Solution in a concentration of 1 mg/mL (product number I364).

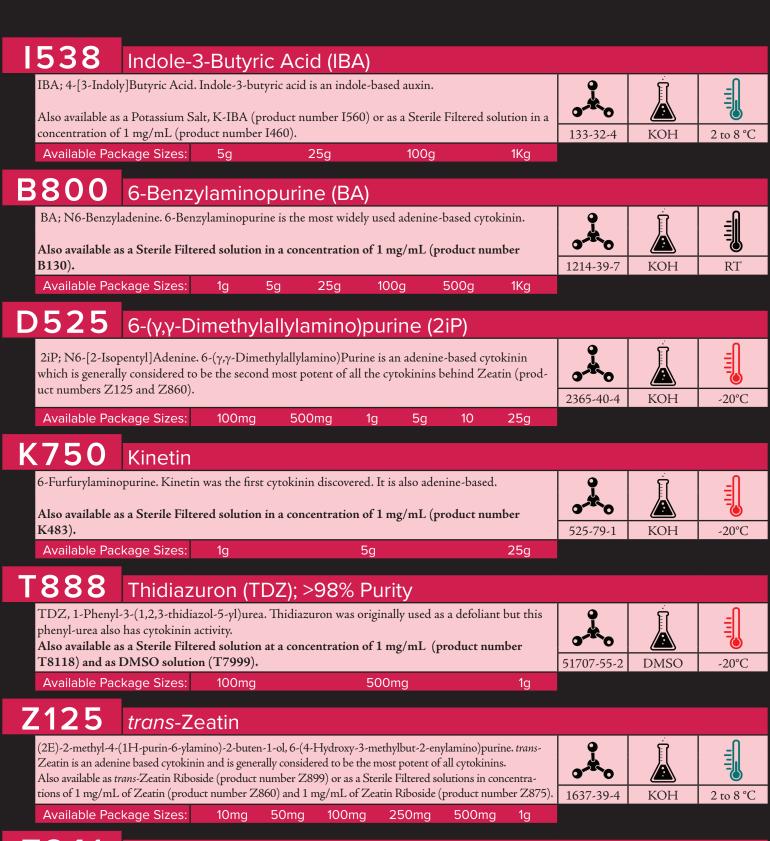

Available Package Sizes:

5a

25a

100a

 $\mathsf{\Gamma841}$ $^{\prime}$ $^{\prime}$ $^{\prime\prime}$ $^{\prime\prime}$ $^{\prime\prime}$

*meta-*Topolin is an adenine-based cytokinin that generally causes less root inhibition than 6-Benzylaminopurine (product number B800 and B130).

75737-38-1

KOH

-20°C

Also as a Sterile Filtered solution in a concentration of 1 mg/mL (product number T7885).

Available Package Sizes: 100mg 500mg 1g

Indicates the Chemical Abstracts Service (CAS) Number of the product.

Indicates the solubility or miscibility of the product.

Indicates the storage temperature of the product. RT indicates room temperature.

P6820 PTC^{3™}

PTC3™ (Plant Tissue Culture Contamination Control) is a broad spectrum biostat/fungistat that can be added to plant tissue culture media to reduce microbial and fungal contamination and can be autoclaved.

Available Package Sizes:

25_ml

100mL

500mL

M5630 Media Optimization Kit (MS)

Our media optimization kit (MS-based) allows the user to optimize the nutrient formulation using 5 different components which make up the macronutrients, mesonutrients, micronutrients, and iron.

Available Package Sizes:

I Kit (Individual liquid components can be purchased separately)

Vitamin Mixes for Plant Tissue Culture

Phyto Technology Laboratories offers vitamin mixes of some of the more popular formulations used in plant tissue culture. All solutions listed below are sterile filtered through $0.2~\mu m$ filter, and confirmed sterile according to USP <71> protocols. If we carry the original formulation of media that includes these vitamins it is listed as the Parent Media on this table (though more than one media may use vitamins described below). If we don't have what you're looking for, remember that we carry all of the commonly used vitamins, you can find those product listings at www.phytotechlab.com.

Product Number	Product Name	Usage at (1x)	Stock Solution Usage	Sterile?	Publish Date	Parent Media	Storage	Package Size
M533	Murashige & Skoog Vitamin Powder (1000x)	0.1031 g/L	10.31 g/100mL	n/a	1962	M519	2 to 8 °C	100mL 250mL

SCIENCE CAN BE CHALLENGING.

RELIABLE RESEARCH

"QUALITY"

"INNOVATION"

"SERVICE"

More than just words, this is the backbone of our company culture. They are a part of our everyday decision making process from customer service to manufacturing to product development, as we strive to provide you with high-quality products that help you conduct *Reliable Research*. From innovative proprietary media, culture vessels, and chemicals, to custom media formulation and services, we provide the products and services you need, so that together, we can continue

"Helping Build a Better Tomorrow Through Plant Science" The
